ESTIMATED COST

\$2,625.84

Service Details - Sea lamprey scRNA-seq analysis

Consultant: Stephanie Hickey, Ph.D.

Each service includes:

- A one-hour project planning meeting so we can understand specific project needs
- A one-hour follow-up meeting to discuss results and answer any follow-up questions
- A methods write-up for publication
- The code used to generate the results for reproducibility
- Raw data storage for three years

This service includes:

- Identification of high-quality cells to include in the analysis
- Integrating libraries from female, male, and undetermined germ cells
- Clustering and cluster annotation given researcher-supplied marker genes
- Identification of cluster enriched genes
- Single-cell trajectory analysis with Monocle3
- Identification of genes that change as a function of pseudotime
- Analyzing the genes that are regulated around trajectory branch points
- Generating an analysis summary report

Item Description	Cost per unit	Number of units	Estimated Cost
Analysis	\$67.00	24 hrs	\$1,608
Results reporting and methods write-up	\$67.00	6 hrs	\$402
Compute and three year storage	\$0.27	792 Gb	\$615.84
This total <u>does not</u> include Facilities & Administrative (F&A) costs		TOTAL	\$2,625.84

Terms & Conditions

Prices may change in the future. However, we will honor these prices for these particular services. If further analyses are required for this project that were not accounted for in this document, an updated cost estimate can be provided. An invoice will be provided after the analysis is complete or at the end of the fiscal quarter, whichever comes first. Fiscal quarters end at the ends of September, December, March, and June.

Projects with available data take priority in our queue. In other words, we have a first-data-in, first-results-out policy regardless of when the estimate is signed and returned.

While we plan to store the raw data necessary to perform these analyses for three years, we **highly recommend** archiving your own copy of any raw data.

See additional Bioinformatics Core policies at <https://bioinformatics.msu.edu/Policies>
